PROJECTS

Stock Price Predictor

- It evaluates the underperforming and high-performing stock using sediment analysis of the market.
- The trader would like to be able to monitor two historically correlated stocks and be able to visualize when the correlation between the two weakens. This could indicate a potential trade strategy to simultaneously buy the relatively underperforming stock and sell the relatively outperforming stock.

Spring Boot React Python Firebase

Restaurant Application

- Build using React Native in user can book food and track the order using google map.
- Consists of third party authentication using Google and Facebook.
- Deployed application to apple and google play store.

ReactNative CSS Javascript Animation
